Project specifics

Description

HS2 is a new high-speed line currently under construction and will run between London and Birmingham. In this context, Victor Buyck has been commissioned to manufacture, supply and install the new railway bridge over the M6 in Birmingham.

The bridge consists of a total of 2 viaducts (East Viaduct & West Viaduct), which in turn each consist of 2 closed caisson girders of 315m long, 4.8m high and 3.3m wide. The structure is made entirely of weathering steel.

The bridge is brought to the site by barge, then transported by ferry and truck (except for the heavy parts) to the available assembly area.
